

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Introduction to Azure IoT

Pierre Cauchois, Senior Software Engineer, Microsoft

<http://sched.co/9n2a>

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Agenda

How is Microsoft making it easy for embedded systems engineers to connect their “things” to “the cloud”?

What do you do once the devices are connected?

Embedded Linux
Conference

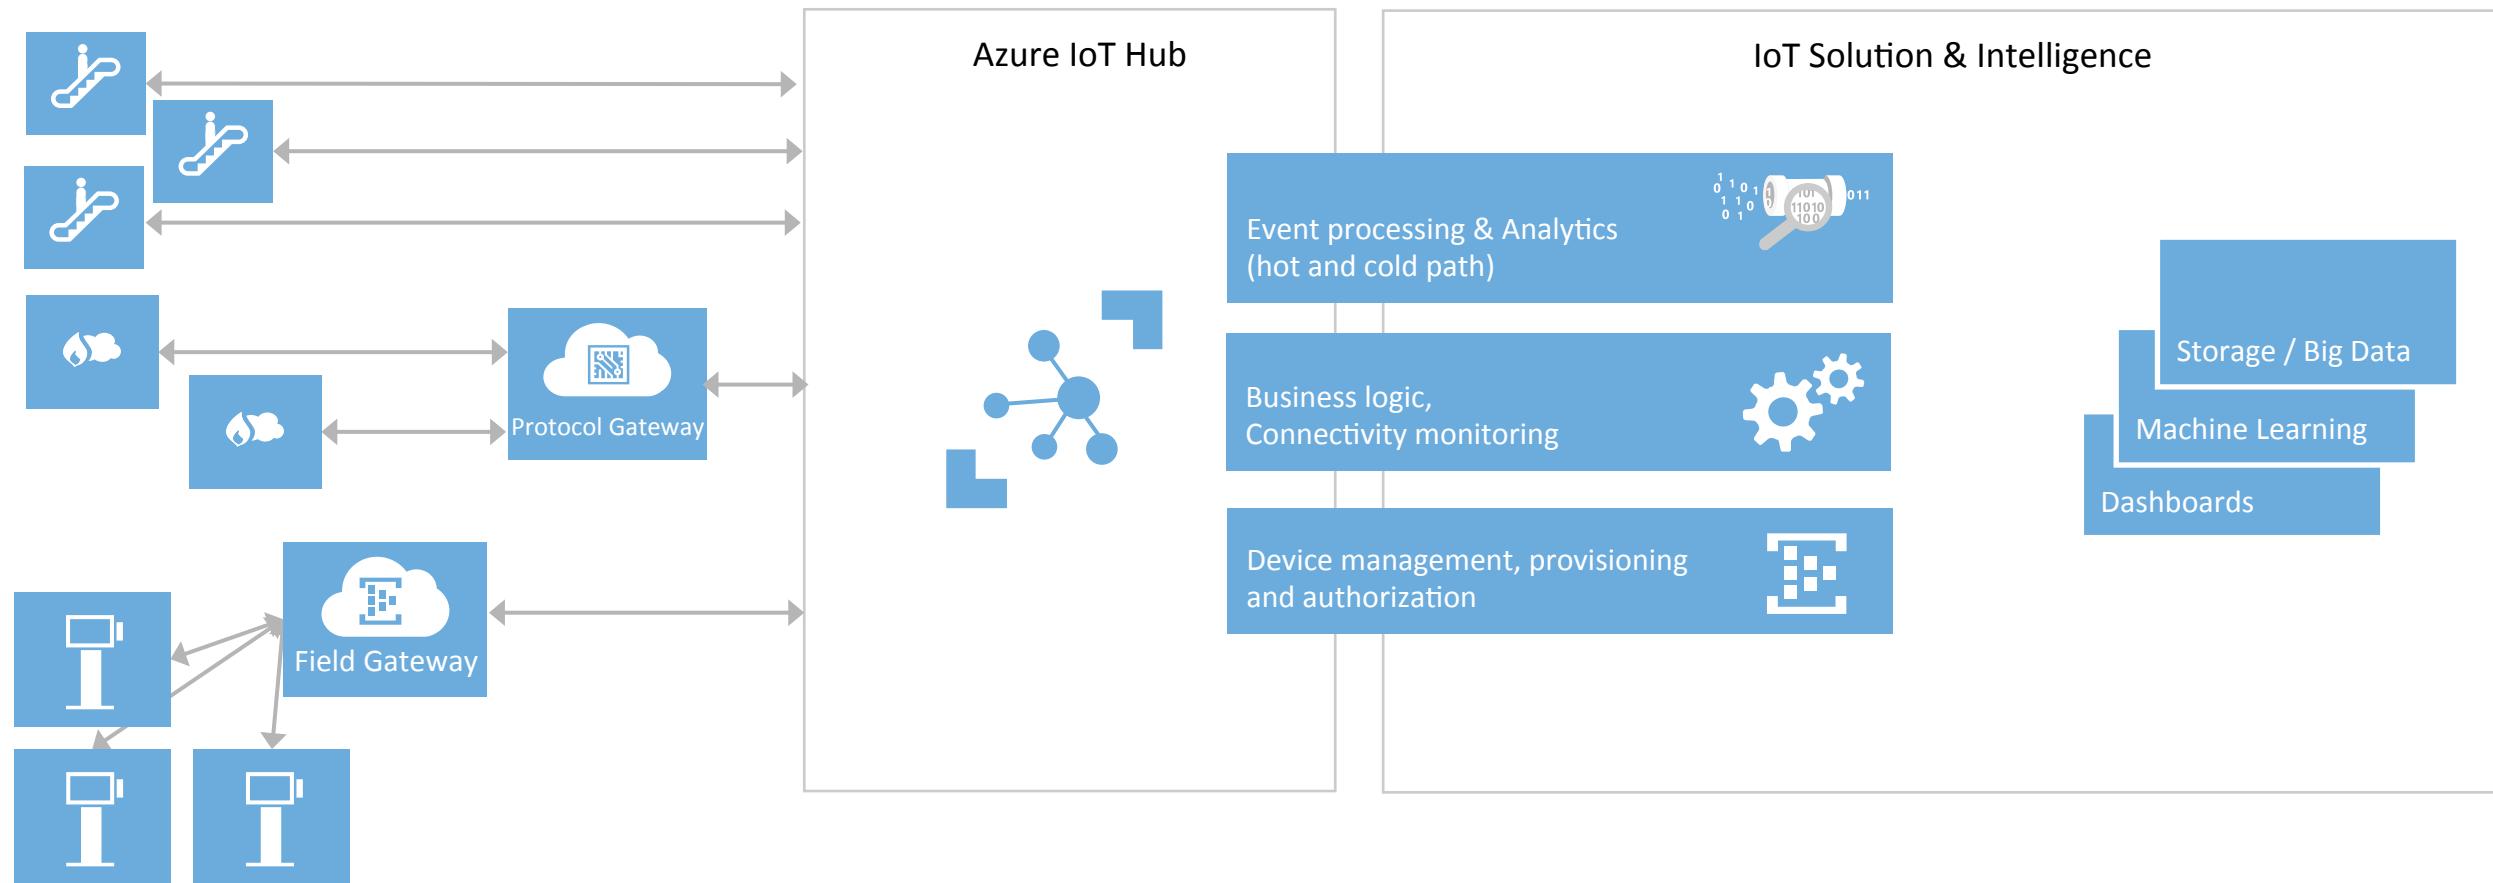

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Part 1: Connecting Devices to the Cloud

— FEBRUARY 21-23 — PORTLAND, OR —

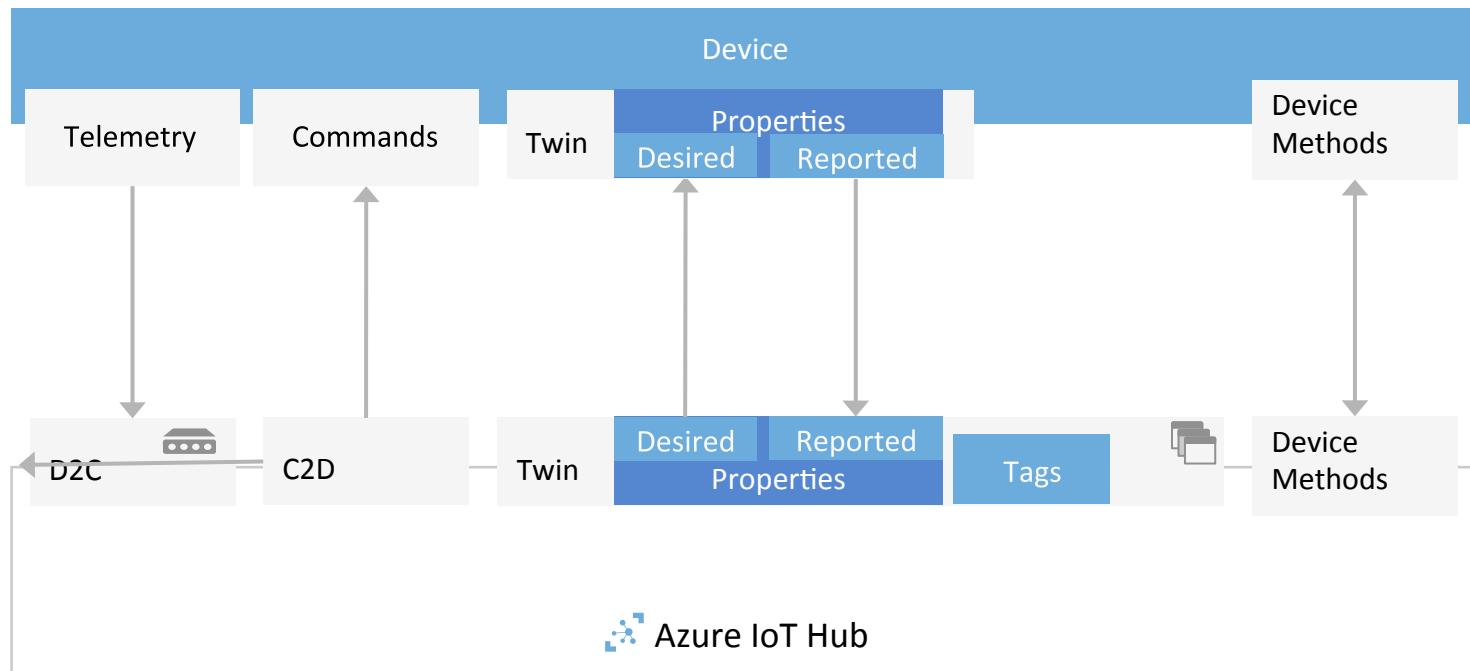

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

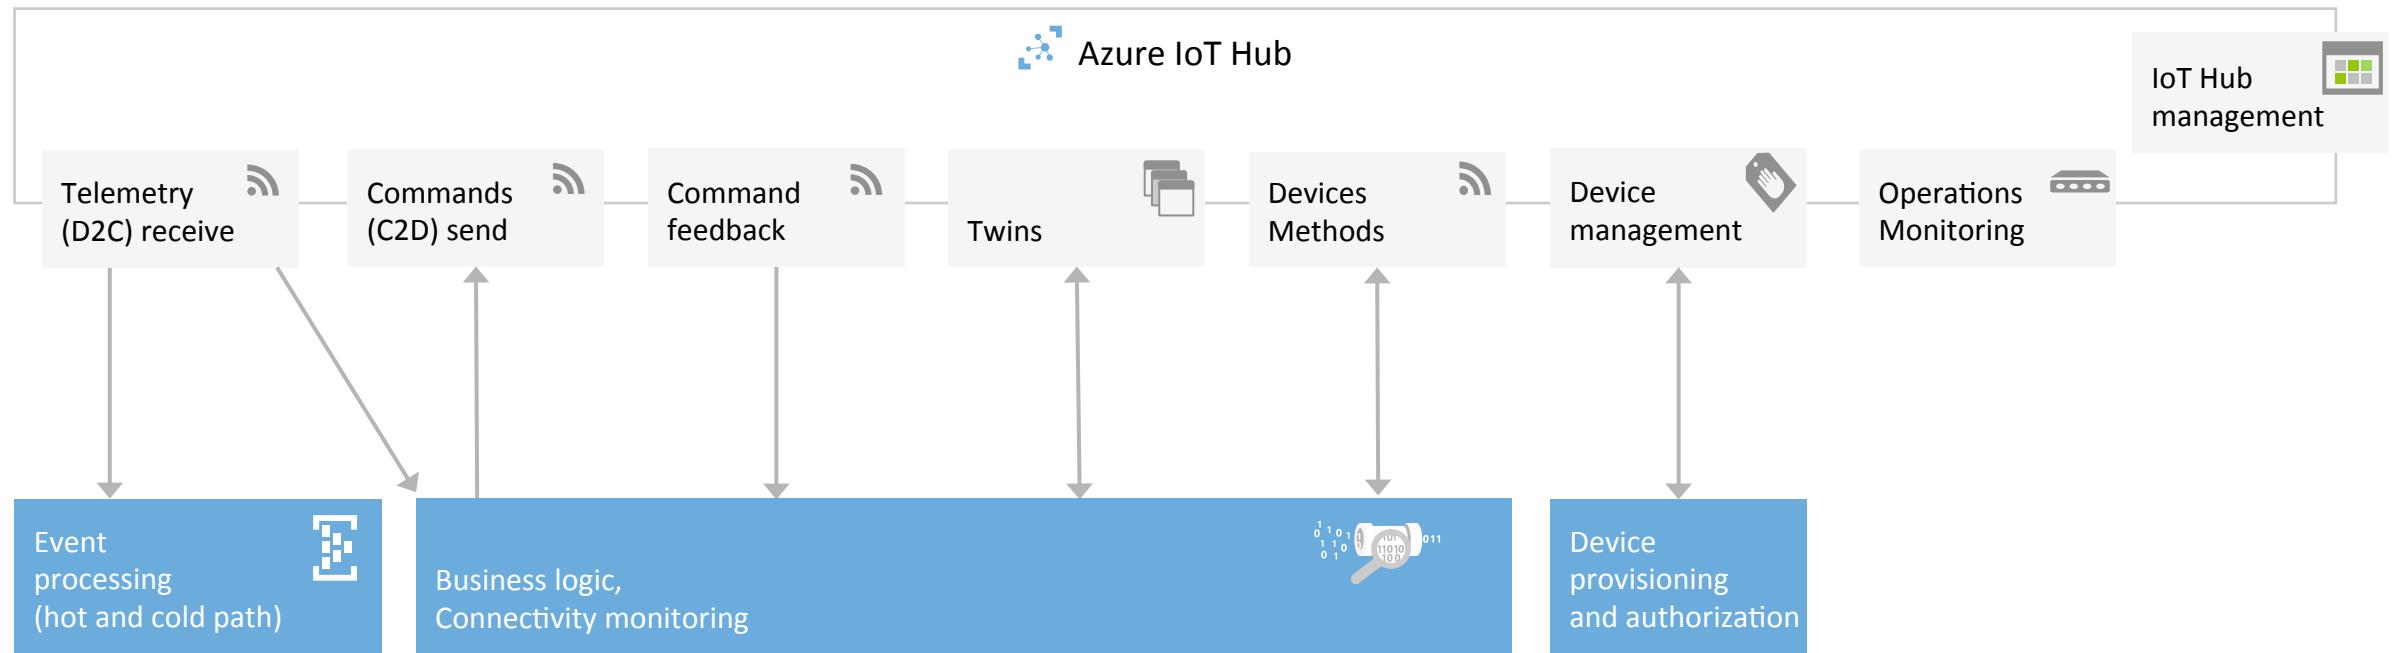

Device-facing Endpoints

— FEBRUARY 21-23 — PORTLAND, OR —

Backend-Facing Endpoints

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

SDK Supported Platforms

- Android (Java or Xamarin)
- Arduino
- Debian Linux (v 7.5)
- ESP8266
- Fedora Linux (v 20)
- FreeRTOS
- iOS (Xamarin)
- mbed OS (v 2.0)
- OpenWRT
- Raspbian Linux (v 3.18)
- STM32
- TI RTOS
- Ubilinux (v3.0)
- Ubuntu Linux (v 14.04)
- Windows Desktop (7, 8, 10)
- Windows IoT Core (v 10)
- Windows Server (v 2012 R2)
- Yocto Linux (v 2.1)
- ... and more

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

SDK Languages

C library:

- Microcontrollers
- RTOS
- Linux
- Windows

Node.js library:

- Node.js (v 0.10+)
- Node-RED

Java library:

- Java (v 1.7+)
- Android

C# libraries supported:

- Windows Desktop (7,8,10)
- Universal Windows Platform
- Windows 10 IoT Core
- Xamarin (iOS, Android)

Python library:

- v 2.7.x
- v 3.5.x

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Getting an SDK

- Clone on Github
- Look for it on your favoring package manager (npm, maven, nuget, apt...)
- Examples in this presentation will be node.js
 - <https://github.com/azure/azure-iot-sdk-node>

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Giving the device an identity

- Device Identity == Identifier + Secret
- Secret:
 - Symmetric keys stored in the Device Registry + Token generated from this key and used by the device (*obviously, the key never travels on the wire*)
 - x509 Certs/Keys on the Device + Certificate Thumbprints in the Device Registry
- TPM Support to store secrets

<https://github.com/Azure/azure-iot-hub-vs-cs/wiki/Device-Provisioning-with-TPM>

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Managing Device Identities

- Each identity supports 2 keys or 2 cert thumbprints for easy roll-over
- Single-device and Bulk APIs to create, update or delete device identities

Giving the Device an Identity

Device

```
var Protocol = require('azure-iot-device-amqp').Amqp;  
  
var Client = require('azure-iot-device').Client;  
  
var connectionString = 'HostName=<hub-name>.azure-  
devices.net;DeviceId=<some-device-id>;SharedAccessKey=<base64-  
key>';  
  
var client = Client.fromConnectionString(connectionString, Protocol);;
```

Service

```
var iothub = require('azure-iothub');  
  
var connectionString = '[IoT Connection String]';  
  
var registry = iothub.Registry.fromConnectionString(connectionString);  
  
var device = { /* device description */ };  
registry.create(device, function(err, res) {  
    /* do something with the result */  
});  
/* update and delete work the same way */  
/* Bulk APIs also available */
```

Sending a Message (“Telemetry” scenario)

Device

```
var message = new Message("foo");
client.sendEvent(message, function (err, res) {/* deal with result */});
```

Service

```
var EventHubClient = require('azure-event-hubs').Client;
var client = EventHubClient.fromConnectionString(connectionString);
client.open()
    .then(client.getPartitionIds.bind(client))
    .then(function (partitionIds) {
        return Promise.map(partitionIds, function (partitionId) {
            return client.createReceiver('$Default', partitionId).then(function(receiver) {
                receiver.on('message', printEvent);
            });
        });
    });
});
```

<https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-devguide-d2c-guidance>

Receiving a Message (“Command” scenario)

Device

```
client.on('message', function (msg) {  
  /* do something with the command */  
  client.complete(msg, function (err, res) {  
    /* We could also “reject” or “abandon” the message */  
    /* do something with the result */  
  });  
});
```

Service

```
var Client = require('azure-iothub').Client;  
  
var connectionString = '[IoT Hub Connection String]';  
  
var client = Client.fromConnectionString(connectionString);  
client.send(<deviceId>, <message>, function (err, res) {  
  /* do something with the result */  
});
```

Embedded Linux
Conference

OpenIoTSummit

— FEBRUARY 21-23 — PORTLAND, OR —

Sending and Receiving Messages

- MQTT_S (and over Websockets)
- AMQP_S (and over Websockets)
- HTTPS
- Protocol Gateway:
 - <https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-protocol-gateway>
 - <https://github.com/Azure/azure-iot-protocol-gateway>

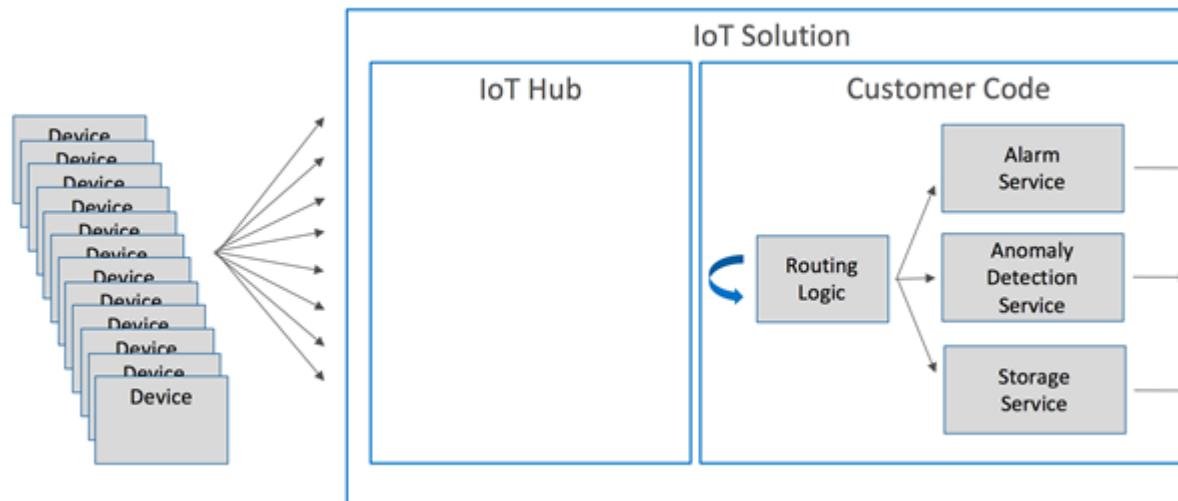

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Routing messages (new!)

<https://azure.microsoft.com/en-us/blog/azure-iot-hub-message-routing-enhances-device-telemetry-and-optimizes-iot-infrastructure-resources/>

Upload large amounts of data at once

Device

```
client.uploadToBlob(<blob_name>, <file_stream>, <file_size>, function
  (err, result) {
    /* do something with the result */
  });

```

Service

```
client.getFileNotificationReceiver(function(err, receiver) {
  receiver.on('message', function(msg) {
    /* msg contains the file location and a token to access it */
    receiver.complete(msg, function(err, res) { /* do something */ });
  });
});

```

- <https://azure.microsoft.com/en-us/blog/upload-files-from-devices-with-azure-iot-hub/>
- <https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-devguide-file-upload>

Execute code on the device and return the result (“Device Methods”)

Device

```
client.onDeviceMethod(<method_name>, function (request, response) {  
  /* Do something with the content of the request */  
  
  response.send(<status_code>, <payload>, function(err, res) {  
    /* do something with the result */  
  
  });  
});
```

Service

```
var methodParams = {  
  methodName: '<Method Name>',  
  payload: '[Method Payload]',  
  responseTimeoutInSeconds: 30 //default  
};  
  
client.invokeDeviceMethod(<device_id>, methodParams, function (err,  
res) {  
  /* deal with result */  
});
```

<https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-node-node-direct-methods>

Maintain a device state and metadata (“Device Twin”)

Device

```
client.getTwin(function(err, twin) {  
  
  twin.on('properties.desired', function(delta) {  
  
    /* Do something with the delta (new property values) */  
  
  });  
  
  twin.properties.reported.update(patch, function(err) {  
  
    /* Do something if that failed */  
  
  });  
});
```

Service

```
registry.getTwin(deviceld, function(err, twin) {  
  
  var twinPatch = {  
  
    tags: { city: "Redmond" },  
  
    properties: { desired: { telemetryInterval: 1000 } }  
  };  
  
  twin.update(twinPatch, function(err, twin) {  
  
    /* Do something */  
  
  });  
});
```

<https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-node-node-twin-getstarted>

Schedule tasks on devices

Device

```
/* Same as desired properties update or device method call */
```

Service

```
var Protocol = require('azure-iot-device-amqp').Amqp;  
var Client = require('azure-iot-device').Client;  
var Message = require('azure-iot-device').Message;
```

```
var client = Client.fromConnectionString(connectionString, Protocol);  
var message = new Message("foo");  
client.sendEvent(message, function (err, res) {/* deal with result */});
```

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Query device twins

```
var query = registry.createQuery('SELECT * FROM devices', 100);
var onResults = function(err, results) {
  /* Do something with the results */
  if (query.hasMoreResults) {
    query.nextAsTwin(onResults);
  }
};
query.nextAsTwin(onResults);
```

<https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-devguide-query-language>

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Monitor Operations and Errors (Service)

```
var EventHubClient = require('azure-event-hubs').Client;
var client = EventHubClient.fromConnectionString(connectionString, '/messages/operationsMonitoringEvents/*');
client.open()
  .then(client.getPartitionIds.bind(client))
  .then(function (partitionIds) {
    return Promise.map(partitionIds, function (partitionId) {
      return client.createReceiver('$Default', partitionId).then(function(receiver) {
        receiver.on('message', printEvent);
      });
    });
  });
});
```

<https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-operations-monitoring>

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Summary: Azure IoT Hub enables you to:

- Use open source, cross-platform SDKs that lets you:
- Manage device identities
- Send and receive millions of messages using industry protocols
- Route these messages to various endpoints
- Upload large amounts of data that wouldn't fit in messages
- Store and query device state and metadata
- Execute code or schedule tasks on devices
- Monitor operations in real time
- Connect devices to the rest of the Azure stack (stream analytics, storage, databases, machine learning...)
- ...

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

How to try and get started?

- Start for free
- Scale as you need
- Priced according to message processing capacity
- <https://azure.microsoft.com/en-us/pricing/calculator/>

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

No Internet Connectivity, No Problem: The Gateway SDK

- <https://github.com/azure/azure-iot-gateway-sdk>
- Open-Source & Cross Platform (duh!)
- Modular, with connectors to mainstream programming languages
- Easily add support for local communication protocols
- Supports OPC-UA

Earlier Breakout Session: Building Modular IoT Gateways with OSS: <http://sched.co/9mAh>

Part 2: What to do with these connected devices?

Embedded Linux
Conference

OpenIoT Summit

— FEBRUARY 21-23 — PORTLAND, OR —

Build your own IoT Solution

- Process Data in Realtime with Stream Analytics
- Build Dashboards with Power BI
- Get Smart with Azure Machine Learning
- Store into Azure Storage or Azure Data Lake
- Run Big Data Analytics with Azure Data Lake Analytics or HDInsight
- Go serverless with Azure Functions
- ...

The screenshot displays a Microsoft Azure IoT predictive maintenance dashboard. At the top, there's a header bar with navigation icons, a URL (dmgmori.azurewebsites.net), and a user profile. Below the header is a dark navigation bar with 'DASHBOARD' and other tabs. The main content area is divided into several sections: 'Aircraft map' showing a wireframe of an aircraft with two engines labeled 'Engine #1' and 'Engine #2'; 'Sensor history' showing four line charts for Sensors 9, 11, 14, and 15, comparing Engine 1 (purple) and Engine 2 (teal); 'Remaining Useful Life (RUL) IN CYCLES' showing values of 157 and 150 for each engine; and 'Cycles #' showing both engines at 42 cycles. A 'Remaining Useful Life (RUL) history IN CYCLES' chart at the bottom shows a fluctuating line for each engine over time.
